You're very welcome Jay. I did not follow up on that metal outbuilding. I remember it now that you mentioned it, but I completely forgot. I will shoot [REDACTED] a quick email inquiring about the structure and its contents. Thank you for the reminder. I'll copy you on the conversation.

Thanks -Nick

Thank you so much, Nick.

Did you happen to resolve the question of that metal outbuilding? Was that a chiller? It had a small pipe routed out of the building open-connected to a downward pipe. I never checked back on that. Did you obtain access to that structure?

Thanks again.

Jay

Hi Jay,

Here is my final inspection report and a photolog I assembled from my last 2 inspections. I sent the permit revoke letter yesterday, with the photos we have, documentation of hauled waste, and final inspection completed I think that wraps up the City's pretreatment portion of the project. If I can provide any additional details or documentation, please let me know. It has been a great learning experience and a pleasure working with you on this project.

Thanks -Nick

Thank you, Nick. Great news!

This is consistent with my findings of 1/17/2019. They had a few totes and several drums of waste, largely hazardous, to go off in the intervening days. Followed by the Evoqua filters pending pickup by that supplier.

We have extensive photo documentation of how the facility was found and how it progressed over two follow-up inspections, if you need it.

Thank you for the promise of the inspection report and photolog. DEQ has a firewall for emails totaling over 10 MB, so you might check the file size before sending.

Thanks again!

Jay

Subject: Solopower Cleanup

Hi Jay,

I met with [REDACTED] (Tetra Tech) at the Solopower site yesterday. I will send you my notes and photos from the inspection once I compile them into a legible document. For the time being I wanted to send you a quick update on my findings. I did not observe any stored waste, used and un-used chemicals, and untreated wastewater during my inspection, it appears to be all gone. We inspected the main production floor, the pretreatment/wastewater room, the VOC room/lab (glycol ether removed), Cadmium Sulfate room, and the plating room. There are several storage tanks in the wastewater room that are still standing but are emptied out.

Clean Harbors is finished with the main cleanup project; however they plan to return to clean the floor where equipment is currently sitting (once it is sold off). Additionally, they have some of their own storage tanks (all dry) to pick up. Wastewater tanks at the facility are going to be sold off, if there is no buyer they will be junked. There are a few Evoqua filters in the plating room that the manufacturer will pick up. [REDACTED] mentioned [REDACTED] has a few manifests for materials removed 1/22/2019 that [REDACTED] will send you by the end of the week.

That is all I have for now. I try to send my report along with photos tomorrow. As far as the City is concerned we have enough documentation of the cleanup to close out the wastewater permit, which I hope to do by the end of the week. Thanks Jay, talk soon!
